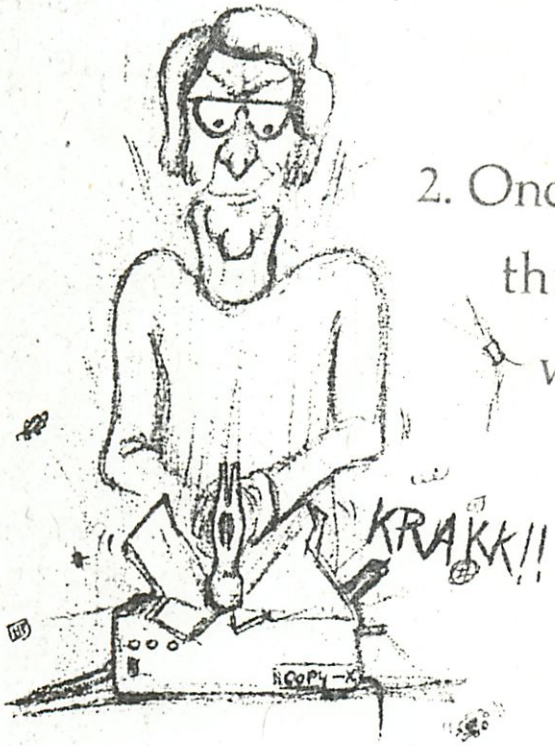
The Laws of Fan Publishing

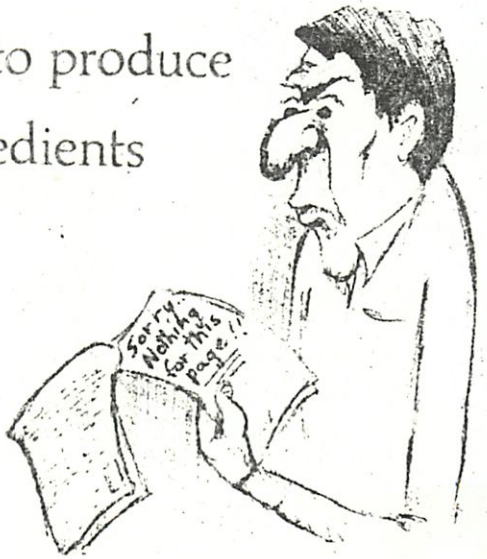
1. A fanzine that cannot be accepted badly, will be.



2. Once something has been fouled up, anything done to improve it only makes it worse...also known as Finagle's Law.

3. The chance of a word being misspelled is proportional to how bad of a typo it will make.

4. If a zine requires "n" ingredients to produce it, there will always be "n-1" ingredients in stock.



5. No zine you print, however brilliantly conceived or executed, will satisfy more than 5% of the audience.

6. The chance that any piece of machinery will break down is proportional to its importance...also: The law of Selective Entropy.

7. Dropped corflu or rubber cement will land where it can do the most damage...also: The law of Selective Gravitation.

8. Any fanzine that attempts to break even...won't.
